# oreak <u>aantinu</u>e break, continue

在迴圈中,例如:for迴圈、while迴圈,如果想要跳過迴圈的一回合,可以使用continue來跳過一回合。

當偵測到 3的倍數時就跳過

```
1 #include <iostream>
2 using namespace std;
   int main()
 5
        for (int i = 0; i < 100; i++){
            if (i % 3 == 0){
8
                continue;
            cout << i << " ";
10
11
12
13
        return 0;
```

當偵測到 3的倍數時就跳過

```
#include <iostream>
         using namespace std;
       4 int main()
              fon (int i = 0; i < 100; i++){</pre>
如果i是3的倍數
                  if (i % 3 == 0){
       8
                      continue;
                  cout << i << " ";
      10
      12
      13
              return 0;
```

當偵測到 3的倍數時就跳過

```
#include <iostream>
         using namespace std;
      4 int main()
             for (int i = 0; i < 100; i++){
如果i是3的倍數
                if (i % 3 == 0){
                    continue;
    就跳過這一回合
     10
                 cout << i << " ";
     11
     12
     13
             return 0;
```

當偵測到 3的倍數時就跳<sup>妈</sup>

```
#include <iostream>
       using namespace std;
      4 int main()
            for (int i = 0; i < 100; i++){
如果i是3的倍數
               if (i % 3 == 0){
                   continue;
   就跳過這一回合
                cout << i << " ";
     10
   即迴圈類continue以
   下的程式碼不會執行
     13
            return 0;
```

當偵測到 3的倍數時就跳<sup>2</sup>

```
#include <iostream>
           using namespace std;
        4 int main()
               fon (int i = 0; i < 100; i++){</pre>
如果i不是3的倍數
                   if (i % 3 == 0){
        8
                        continue;
                    cout << i << " ";
       10
       12
       13
               return 0;
```

當偵測到 3的倍數時就跳<sup>2</sup>

```
#include <iostream>
          using namespace std;
         int main()
              for (int i = 0; i < 100; i++){
如果i不是3的倍數
                 if (i % 3 == 0){
                      continue;
       16就輸出i
                  cout << i << " ";
       12
       13
              return 0;
```

```
1 #include <iostream>
2 using namespace std;
3
```

```
X
 1202
                    X
              11 13 14 16 17 19 20 22 23 25 26
                                                  < 100; i++){
            34 35 37 38 40 41 43 44 46 47 49 5
0 52 53 55 56 58 59 61 62 64 65 67 68 70 71 73
74 76 77 79 80 82 83 85 86 88 89 91 92 94 95 97
 98
Process returned 0 (0x0) execution time : 0.1
39 s
Press any key to continue.
```

在迴圈中,例如:for迴圈、while迴圈,如果想要結束迴圈,可以使用break來結束。

```
1 #include <iostream>
        2 using namespace std;
        3
        4 int main()
        5 {
               string input;
input (cin >> input) {
                   if (input == "bye!"){
        8
        9
                       cout << "Goodbye!" << endl;</pre>
       10
                       break;
       11
       12
                   cout << "Hello, " << input <<
       endl;
       13
       14
               return 0;
       15
```

```
1 #include <iostream>
                    2 using namespace std;
                    3
                    4 int main()
                           string input;
                           while (cin >> input){
如果輸入的字串是"bye!"
                               if (input == "bye!"){
                                   cout << "Goodbye!" << endl;</pre>
                                   break;
                   10
                   11
                   12
                               cout << "Hello, " << input <<
                   endl;
                   13
                   14
                           return 0;
                   15
```

```
1 #include <iostream>
                   2 using namespace std;
                   3
                   4 int main()
                         string input;
                         while (cin >> input){
如果輸入的字串是"bye!"
                            if (input == "bye!"){
                                 cout << "Goodbye!" << endl;</pre>
    就說再見,然後結束迴圈
                                 break;
                  11
                             cout << "Hello, " << input <<</pre>
                  12
                  endl;
                  13
                  14
                         return 0;
                  15 }
```

```
如果輸入的字串不是"bye!"
```

```
1 #include <iostream>
 2 using namespace std;
 3
 4 int main()
        string input;
        while (cin >> input){
            if (input == "bye!"){
                 cout << "Goodbye!" << endl;</pre>
                break;
10
11
12
            cout << "Hello, " << input <<
endl;
13
14
        return 0;
15
```

```
如果輸入的字串不是"bye!"
```

```
#include <iostream>
 2 using namespace std;
 3
   int main()
        string input;
        while (cin >> input){
            if (input == "bye!"){
                 cout << "Goodbye!" << endl;</pre>
10
                 break;
            cout << "Hello, " << input <<</pre>
endl;
13
14
        return 0;
15
```
